

Open Database Connectivity

Optimize your reporting and analysis capabilities. With Open Database Connectivity, you're able to expand your flexibility to include applications beyond Timberline® Office.

With Timberline Office ODBC software, you can easily move data back and forth between Timberline Office applications and other popular software, like Microsoft® Excel, Microsoft Word, Microsoft Access and Crystal Reports®. In short, ODBC helps you streamline work activities and increase analysis and reporting capabilities.

For instance, use ODBC to mail merge a Word document with Timberline Office vendor information to alert vendors who need to update their insurance. Or transfer estimate data from Timberline Office to Excel to graphically show how your estimate breaks out by category (labor, material, equipment, etc.).

ODBC also gives you the tools to keep the Timberline Office data you use in other software up to date and ready to use. So you can be confident in the accuracy of the work you deliver.

Product features

- Designed for the 32-bit multitasking operating environments of Microsoft Windows® 98, NT®, ME, 2000 and XP.
- Smoothly transfers data between Timberline Office accounting or estimating applications and other popular software programs, like Microsoft Excel, Microsoft Word, Microsoft Access and Crystal Reports.
- Maintains Timberline Office security at all times.

Open Database Connectivity is a part of Timberline Office, fully integrated software created to streamline work and connect the people you depend on to build your business.
