

## Business Process Management

### What is business process modeling software?

Business Process management is managing the processes that are critical to the performance of your business. Business process modeling software allows business people to model their business processes using a graphical designer.

**BPM Professional** — BPM Professional includes the BPM Portal, BMT KPI Monitor, BMT Service Framework, and BPM Process Scheduler. Essentially it is the “run-time” version of BPM that allows you to run the processes like the one above.

**BPM Enterprise** — Includes all of BPM Professional—and an unlimited use of the BPM designer tool

#### Predefined processes:

**VPO Process: (ETS/ETO orders)** You can have your supervisors create ETS/ETO orders on their web enabled device (Palm, Blackberry, Windows Mobile, Tablet PC or even iPhone). The order is routed through the office, and sent to the supplier. The categories are tracked and reported on with KPI graphs in the purchasing portal.

**Bid Process: (Getting Supplier quotes and pricing)** Track the process of asking suppliers for quotes on your item database, Suppliers enter the pricing in a spreadsheet and upload to your website where you can compare suppliers pricing and import directly to the WMS database once approved.

**Or— anything else...** - Define your own processes—and use either BPM Professional to run them, or BPM Enterprise to take complete control. Call use today to find out more!

## Business Process Management
